

INTERNAL RELEASE BRIEF · V1

The new **Get paid** experience

Stripe Connect is now the backbone of Dyia. Send branded invoices, one-tap pay links, and quote/job payment requests — all from a single workspace that shows every dollar moving to the merchant's bank.

SURFACE

Payments tab · `/pay/[token]`

OWNER

Dev (engineering) · Business
team (rollout)

RELEASED

May 27, 2026

Confidential · Dyia internal · For Marco, Hanna, and the rapid-build team

WHAT CHANGED

From "status panel" to a real payments backbone

The old Payments tab was a Stripe Connect status screen with one tucked-away path (per-quote "Request Payment"). The new tab is a full workspace: invoices from scratch, quick pay links, real activity feed, monthly stats, and a transparent funds-flow diagram so users always know where the money is going.

NEW · PAY LINKS

One-tap requests for a fixed amount

Pick an amount, optionally add a customer, share the link. Customer pays via Stripe Checkout. Best for deposits, ad-hoc work, tips.

NEW · INVOICES

Itemized invoices with tax + due date

Build a real invoice (line items, qty, rate, tax, notes), get a branded /pay page that mirrors what your customer sees on Stripe Checkout. Optional invoice number per merchant.

IMPROVED · HUB

Monthly stats + activity in one view

Paid this month, awaiting payment, net to your bank, Dya fees collected. Filterable activity list with status + kind badges. Setup banner collapses when Stripe is fully live.

IMPROVED · TRANSPARENCY

"Where the money goes" explainer

4-step diagram showing customer pay → Dya 0.75% fee → Stripe balance → auto-payout to bank. Removes confusion about who holds funds (we don't).

0 net-new dependencies

Type-safe (TS strict passes)

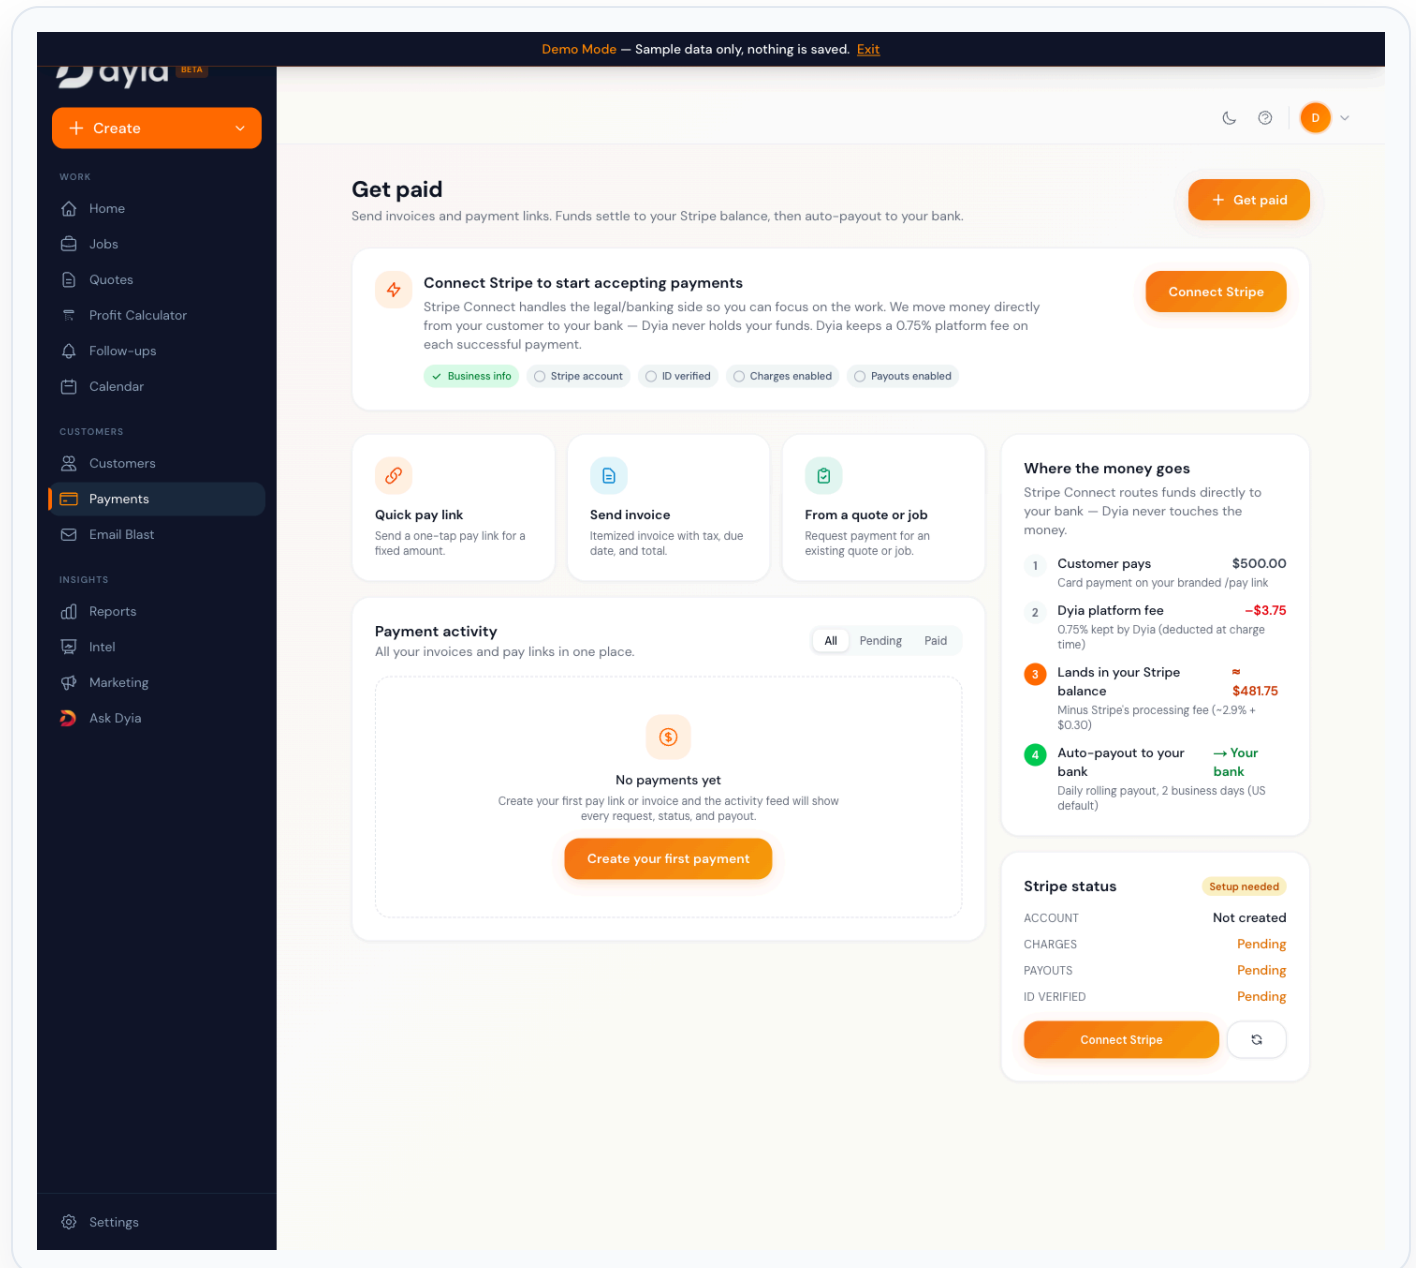

One DB migration: 039

Backwards compatible with quote/job payments

Mobile-first /pay layouts

The Payments hub

Single entry point for everything money. Onboarding is broken into 5 visible pills so users always know the next concrete step. Once Stripe is live, the setup banner disappears and four stat cards take its place (paid this month, awaiting payment, net to your bank, Dyaia fees collected).

5 visible Connect steps

3 primary action cards

Filterable activity (All / Pending / Paid)

Funds-flow diagram (right column)

Quick pay link — under 10 seconds

Tap "Get paid," type the amount and a note, hit "Create pay link." The footer always shows the live net payout after Dya's 0.75% fee (here: **\$447 after \$3 Dya fee** on \$450). Customer info is optional but appears on the public pay page when provided.

Get paid

Send a one-tap payment link or a full invoice. Funds land in your Stripe balance, then your bank.

Finish Stripe setup to start collecting
You can build invoices and pay links now, but you need to connect Stripe before customers can pay.

Customer info: optional

Build a real invoice from scratch

Line items, quantities, rates, tax %, due date, custom invoice number, and an optional note to the customer. Live subtotal + tax + total update as you type. The footer always reflects the merchant's net after Dya's 0.75% fee. Invoice numbers are uniquely indexed per merchant (collisions return a friendly 409).

Full garage cleanout (2-car)	1	\$ 650	×
Mattress disposal fee	2	\$ 45	×
Same-day service surcharge	1	\$ 75	×

TAX (%) NOTES FOR CUSTOMER (OPTIONAL)

Subtotal	\$815
Tax	\$245
Total	\$1,060

CUSTOMER (OPTIONAL BUT RECOMMENDED)

YOU'LL GET PAID
\$1,052 after \$8 Dya fee

3 line items · math validates in-place

Tax % per invoice (defaults to 0)

Per-merchant unique invoice numbers

What the customer sees · Invoice

A full branded invoice page that mirrors what was built in the app: business name + contact, invoice number, due date, "Bill to" block, itemized table, subtotal/tax/total, merchant notes, and a single "Pay \$X" CTA. Stripe Checkout also receives the real line items so the receipt matches the invoice.

Mattress disposal fee	2	\$45	\$90
Same-day service surcharge	1	\$75	\$75
Subtotal			\$815
Tax			\$245
Total due			\$1,060

NOTES
Thanks for choosing us! Payment due within 14 days.

Pay \$1,060

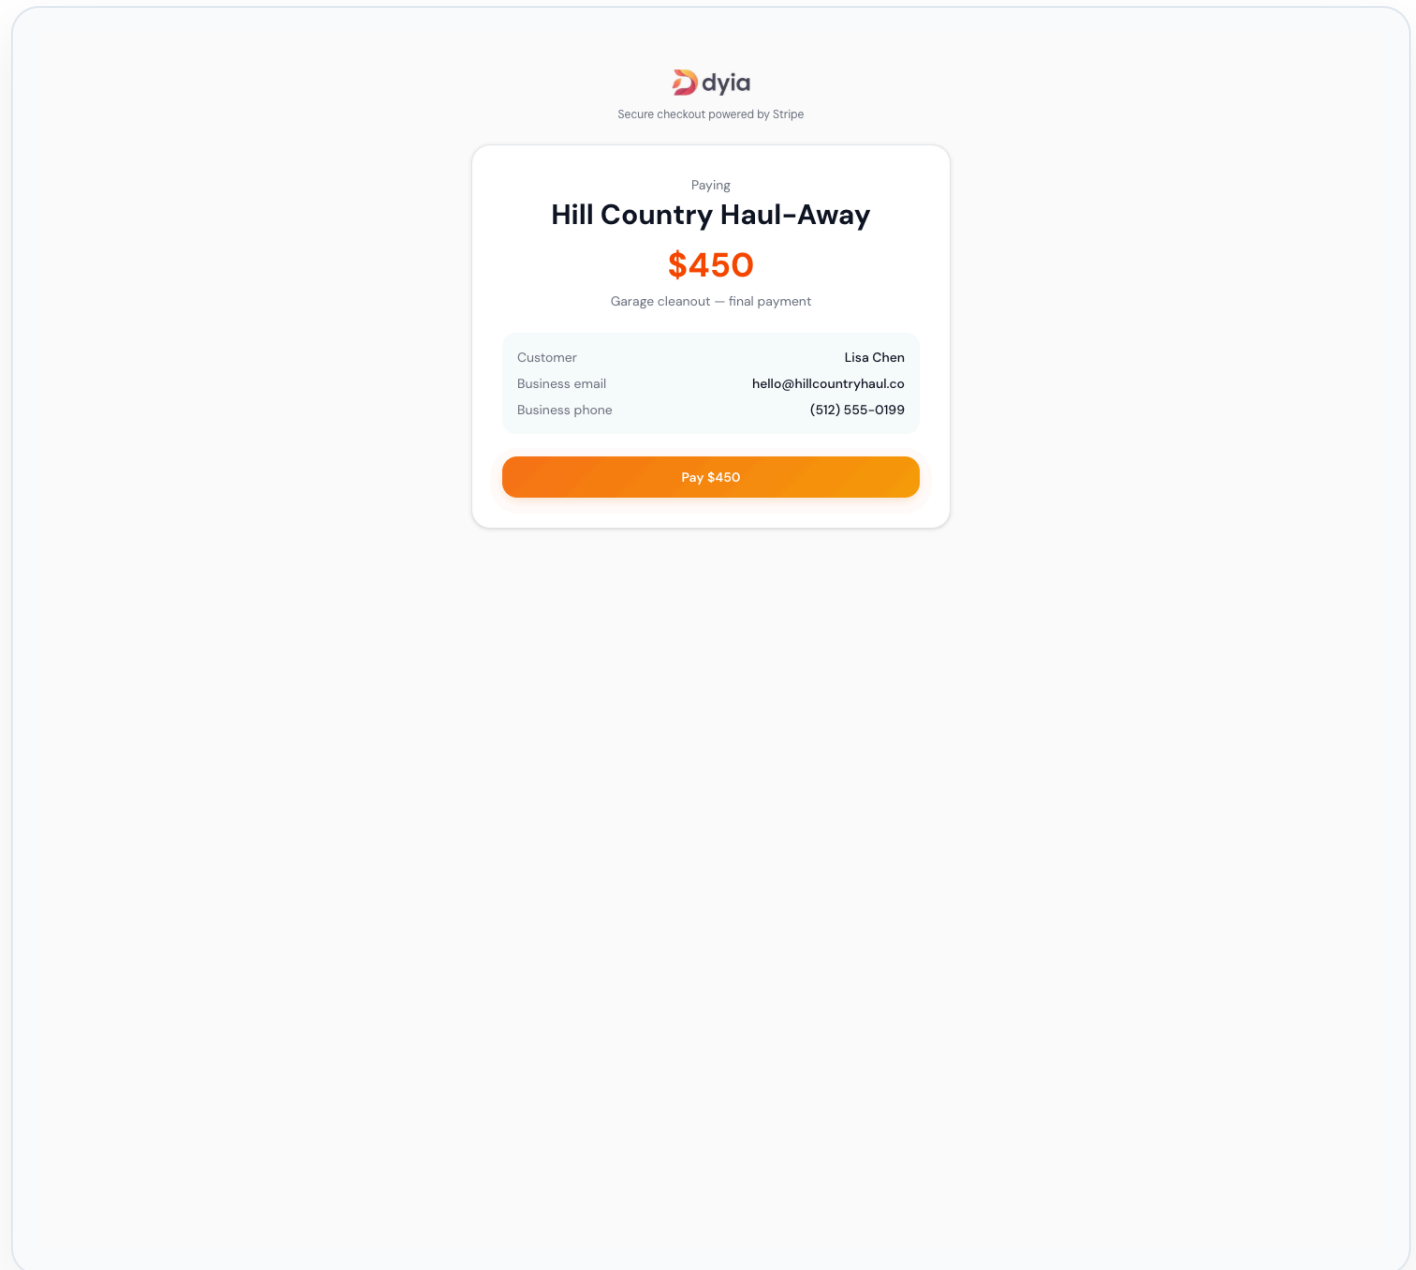

Itemized — matches Stripe receipt

No login required

Status pill: Awaiting payment / Paid

What the customer sees · Pay link

Same /pay route, slimmer layout when the merchant just wants a one-tap charge. Big amount, what it's for, business contact info, and a single Pay button. Optimized for SMS / iMessage / WhatsApp where the customer taps once and is in Stripe Checkout.

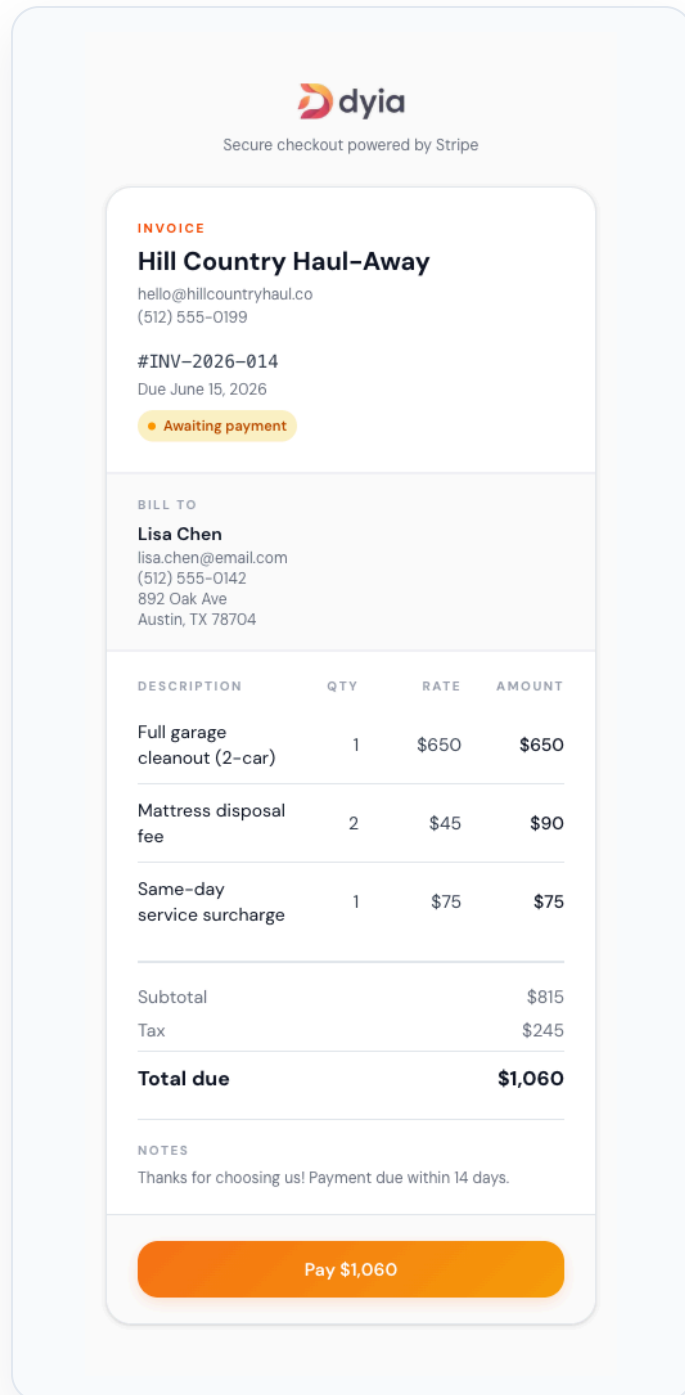

One tap to Stripe Checkout

Webhook + verify endpoint redundancy

Idempotent: cannot double-pay

Designed for the phone first

Most customers will receive the link by text and pay from their phone in under a minute. Both layouts collapse to a single column with thumb-reach Pay buttons.

The invoice layout is designed for a single column on a mobile device. It features the Dya logo at the top, followed by the text 'Secure checkout powered by Stripe'. The main content is titled 'INVOICE' and 'Hill Country Haul-Away'. It includes contact information for Hill Country Haul-Away, an invoice number, and a due date. A status bar indicates 'Awaiting payment'. Below this is a 'BILL TO' section with the customer's name and address. The core of the invoice is a table listing services: Full garage cleanout (2-car), Mattress disposal fee, and Same-day service surcharge, each with a quantity, rate, and amount. A subtotal, tax, and total due are listed at the bottom. A 'NOTES' section provides a thank you message and a 14-day payment deadline. A large orange 'Pay \$1,060' button is at the bottom.

Where the money goes (Dyia never holds funds)

Stripe Connect Express routes funds straight from the customer to the merchant's bank. Dyia's 0.75% fee is deducted at charge time — we don't custody balances or process payouts ourselves. Merchants can open the Stripe dashboard from the app to see real-time payout schedules.

TALKING POINT FOR THE TEAM

"Dyia never touches your money."

This is the single most important customer-facing line. Stripe Connect is the funds mover; Dyia is the workspace, the invoice builder, the activity feed, and the receipt ledger. The 0.75% is our piece of every successful charge — Stripe's processing fee is separate and not ours.

Release checklist

Below is everything the engineering + business teams need to do once this branch merges. The DB migration is required because invoices and standalone pay links were previously blocked by a NOT NULL-ish CHECK constraint.

Engineering

- ☐ Apply Supabase migration `039_standalone_payments_and_invoices.sql` (idempotent — safe to re-run). ENG
- ☐ Confirm `STRIPE_SECRET_KEY`, `STRIPE_WEBHOOK_SECRET`, and Stripe Connect platform settings are live in production. ENG
- ☐ Verify `checkout.session.completed` webhook is firing — known production gap previously caught by BUG-031. ENG
- ☐ Smoke test: pay link → pay \$1 in Stripe test mode → Activity feed shows "Paid". ENG
- ☐ Smoke test: invoice with 2 line items + tax → verify Stripe receipt matches. ENG

Business / rollout

- ☐ Update the public marketing page to highlight invoicing + pay links as core features. MARKETING
- ☐ Pricing-page footnote: *"0.75% platform fee per successful payment, Stripe processing fees separate."* MARKETING
- ☐ Add the 4-step funds-flow diagram to onboarding emails and help center. SUPPORT
- ☐ Loom walkthrough (Marco): hub → invoice → customer view → Stripe payout. FOUNDER
- ☐ Announce to beta cohort with link to this PDF + screenshots. FOUNDER

Known follow-ups (non-blocking)

- ☐ Idempotent "get-or-create" pay link from Quotes/Jobs (today a re-click creates a duplicate row). ENG · P2
- ☐ Email-the-link via Resend / connected Gmail-Outlook (today: copy-and-paste). ENG · P2
- ☐ Payout ledger view inside Dyia (today: deep-link to Stripe dashboard). ENG · P3
