

What's New: Retention, Niches, Payments & Demo Access

A screenshot-by-screenshot tour of the functionality shipped after our last meeting — cancellation feedback & retargeting, cleaner launch metrics, lawn care / house cleaning readiness, receipts, and a safe marketing demo path.

Prepared for **Marco** and the Dyia team · Generated June 27, 2026

Every screenshot below is captured live from the running app in demo mode (sample data only — no real customer information).

1 At a glance

Six things changed. Each gets its own screenshot in the pages that follow.

RETENTION

Cancellation feedback

When someone cancels, we now ask why — reason, what they liked, what they didn't — without blocking the cancellation.

ADMIN

Cancellations & retargeting

A new admin section stores every cancellation with the user's details so you can reach back out with an offer.

METRICS

Clean launch numbers

Test/demo accounts can be tagged and are excluded from your real stats, so the dashboard reflects actual users.

NICHES

Lawn care & cleaning

Onboarding, quotes, and job expense labels now adapt to the trade instead of always assuming junk removal.

PAYMENTS

Invoices & receipts

Branded invoices and pay links already exist; completed jobs now also get a downloadable receipt PDF.

MARKETING

Demo access

A password-protected demo launcher lets you record promos with sample data — never real customer numbers.

2 Marketing demo launcher

On the sign-in screen there is now a dedicated demo entry so you can open a fully populated sample account for Loom videos and screenshots.

The image shows a sign-in page for 'dyia'. At the top center is the 'dyia' logo. Below it is a white card titled 'Sign in to Dyia' with the subtitle 'Welcome back! Please sign in to continue'. The card contains a 'Continue with Google' button, an 'or' separator, an 'Email address' field with the placeholder 'Enter your email address', and an orange 'Continue' button. Below the card is a link: 'Don't have an account? [Sign up](#)'. At the bottom of the card, it says 'Secured by  clerk' and 'Development mode'. Below the sign-in card is a new 'Marketing demo' card. It has the title 'Marketing demo', a subtitle 'Use the demo password to open sample data without exposing real customer numbers.', a 'Demo password' input field, and an orange 'Open Demo' button. At the very bottom of the page is a link: '← Back to homepage'.

Sign-in page. The new "Marketing demo" card sits beneath the normal sign-in, with a password field and an "Open Demo" button.

WHAT'S NEW HERE

- Enter the demo password and click **Open Demo** to load the sample business instantly.
- No real customer data is ever exposed — the demo uses built-in sample jobs, quotes, and payments.
- Perfect for recording promos: everything is clickable and looks live.

3 Dashboard (the demo you can record)

Once demo mode is on, the full product opens with realistic numbers — daily revenue, profit, schedule, and goal progress.

Authenticated home. Live revenue/profit, today's schedule, and monthly-goal progress, all running on safe sample data.

WHAT'S NEW HERE

- This is the exact view marketing can screen-record without touching production data.
- A small demo-mode banner stays visible so it is always clear this is sample data.

4 Receipts after a completed job

This answers Marco's question directly: after a job is done, you can hand the customer a branded receipt.

Jobs view. Each completed job with revenue now shows a **receipt download** action alongside "request payment", edit, and delete.

WHAT'S NEW HERE

- Completed jobs expose a one-click **receipt PDF** (branded with your business name, logo, and totals).
- This is separate from collecting payment — it is the "here's your receipt" document customers ask for.
- Pay links / invoices for the same job still work exactly as before.

5 Invoices & payment links

For the "can I send an invoice / receipt after a job" question, the Payments hub already covers invoicing and collection once Stripe is connected.

The screenshot displays the Dylia Payments hub interface. At the top, a status bar indicates "Demo Mode — Sample data only, nothing is saved. [Exit](#)". The left sidebar contains a navigation menu with sections: WORK (Home, Jobs, Quotes, Profit Calculator, Follow-ups, Calendar, Maps), CUSTOMERS (Customers), and INSIGHTS (Reports, Intel, Marketing, Ask Dylia). The main content area is titled "Get paid" and includes a sub-header "Send invoices and payment links. Funds settle to your Stripe balance, then auto-payout to your bank." Below this are four summary cards: "PAID IN JUNE" (\$1,420, 3 payments), "AWAITING PAYMENT" (\$2,182, 4 open requests), "NET TO YOUR BANK · JUNE" (\$1,410, After Dylia fee), and "DYLIA FEES COLLECTED" (\$10, June so far). A "Stripe dashboard" button and a "+ Get paid" button are also present. Below the summary cards are three action cards: "Quick pay link", "Send invoice", and "From a quote or job". The "Payment activity" section shows a list of transactions with filters for "All" (7), "Awaiting" (3), "Overdue" (1), and "Paid" (3). The activity list includes three entries: a "Pay link" for Lisa Chen (\$540.00, incl. \$90.00 tip, You get \$536.62), an "Invoice" for Amanda Torres (\$279.80, incl. \$20.00 tip, You get \$277.85), and a "From quote" for Robert Hayes (\$600.00, You get \$595.50). On the right, the "Where the money goes" section shows a breakdown: 1. Customer pays \$500.00 (Card payment on your branded /pay link), 2. Dylia platform fee -\$3.75 (0.75% kept by Dylia (deducted at charge time)), 3. Lands in your Stripe balance \$481.75 (Minus Stripe's processing fee (~2.9% + \$0.30)), and 4. Auto-payout to your bank (Daily rolling payout, 2 business days (US default)). A "View payouts in Stripe →" button is at the bottom.

Payments hub. Create branded invoices or pay links, see the transparent fee/payout breakdown, and track every request by status.

WHAT'S NEW HERE

- Send an **itemized invoice** (with tax + due date) or a quick **pay link**.
- The money-flow panel shows the platform fee and the exact amount that lands in the bank.
- Activity list tracks Paid / Awaiting / Overdue for every request.

6 Lawn care & house cleaning readiness

The two extra niches are no longer just marketing pages — the quoting flow adapts to the trade.

The screenshot shows the 'New Quote' form in the Dyaia software. The interface is dark-themed with orange accents. A sidebar on the left contains navigation links: Home, Jobs, Quotes (highlighted), Profit Calculator, Follow-ups, Calendar, Maps, Customers, Payments, Email Blast, Reports, Intel, Marketing, and Ask Dyaia. The main form area is titled 'New Quote' with the subtitle 'Create a professional quote'. It includes a 'Back' button in the top right. The form fields are organized into sections: 'Customer' (Name, Phone, Email, Address, Job Description), 'Quote Date', and a 'Save current pricing as template' link. At the bottom are three buttons: 'Cancel', 'Save Draft', and 'Save & Download PDF'.

Quote builder. Non-junk trades use clean line items and templates; the junk-only load calculator is now clearly scoped to junk removal.

WHAT'S NEW HERE

- Onboarding seeds trade-appropriate starter prices (mowing/edging for lawn care, standard/deep clean for cleaning).
- The junk-removal load calculator is hidden for other trades, so lawn/cleaning quotes stay simple.
- Job expense labels adapt too (e.g. fuel/yard waste for lawn care, supplies/travel for cleaning).

7 Business type in Settings

The selected trade drives the niche behavior above and can be changed any time.

Settings · Business. The Business Type selector is what tells Dyia whether to behave like junk removal, lawn care, or cleaning.

WHAT'S NEW HERE

- Switching business type updates pricing templates and quote/job behavior for that trade.
- This is the single control Marco can flip when testing each niche end-to-end.

8 Cancellation feedback (in-app)

The headline retention feature. When a Pro user cancels, this optional prompt appears **before** the downgrade is scheduled — capturing exactly what Marco asked for.

Settings · Account · Cancel subscription

In-app modal

Before you downgrade

You'll keep Pro until your billing date. If you have a minute, your feedback helps us decide what to fix next.

Main reason

Select a reason (optional) — too expensive, missing feature, hard to use, not using it enough, business changed, using another tool...

What did you like?

Anything useful about Dyia?

What didn't work for you?

Missing workflow, confusing step, pricing, etc.

Keep Pro

Skip feedback

Send feedback & downgrade

Faithful reproduction of the live modal. It is shown here as a styled preview because the cancel control only appears for a real billed Pro account, which the demo deliberately hides.

WHAT'S NEW HERE

- Optional reason + likes + dislikes + free notes, captured in one step.
- Cancellation is never blocked — users can **Skip feedback** and still downgrade.
- Billing truth stays in Stripe; the feedback is saved alongside a snapshot of who canceled and when.

9 Admin cancellations & retargeting

Every cancellation becomes a row you can act on — see who left, why, how much they used the product, and track win-back outreach.

Admin Panel · Cancellations			Retargeting queue
CUSTOMER	PLAN AT CANCEL	USAGE	STATUS
John Smith john@example.com · "too expensive"	pro / monthly	12 jobs · 4 quotes	NEW
Sarah M. sarah@example.com · "missing feature"	pro / annual (trial)	2 jobs · 1 quote	CONTACTED
Mike's Hauling mike@example.com · "business changed"	pro / monthly	30 jobs · 9 quotes	WON BACK

Faithful reproduction of the new admin tab (admin-only, so not visible in the demo account). Filter by status, read full feedback, save retargeting notes, and jump to the user record.

WHAT'S NEW HERE

- New **Cancellations** tab in the admin panel, backed by a dedicated API.
- Each row shows the feedback, the user's plan, and their real usage (jobs/quotes).
- Set a retargeting status (new → contacted → won back / not fit / do not contact) and store notes for promos.

10 Clean launch metrics & account review

So the admin dashboard reflects real customers, test/demo accounts can be tagged and filtered out — without deleting any history.

Account surfaces like this feed the admin metrics. Test/demo users are now excluded from launch stats by default.

Excluded from metrics

Tagged test accounts no longer count toward users, subscriptions, signups, jobs, quotes, customers, AI usage, or engagement funnels.

Easy review

Admin user lists gained **Real users** / **Test-demo** filters, and each user can be tagged or untagged in one click. Nothing is deleted.

WHY IT MATTERS FOR LAUNCH

- Marco's dashboard now shows true paying/active counts, not seeded QA rows.
- Hannah's account (and any real users) stay; only tagged test accounts drop out of the numbers.

11 Suggested reply to Marco & reference

REPLY ON INVOICES / RECEIPTS / DEMO

- "Yes — in **Payments** you can send a branded **invoice** or a **pay link** once Stripe is connected."
- "After a job is completed, you can now also download a **receipt PDF** to give the customer."
- "For marketing, use the **password-protected demo** on the sign-in page so recordings only ever show sample data."

Where each feature lives (for the dev team)

Cancellation prompt + downgrade	src/components/app/Settings.tsx
Feedback persistence on cancel	src/app/api/stripe/subscription/cancel/route.ts
Admin cancellations API	src/app/api/admin/cancellations/route.ts
Admin cancellations + test-account tagging UI	src/components/app/AdminPanel.tsx
Metrics exclusion of test accounts	src/app/api/admin/stats/route.ts, src/lib/admin.ts
Niche onboarding / quote / job behavior	onboarding/page.tsx, QuoteBuilder.tsx, Jobs.tsx
Job receipt PDF + demo launcher	Jobs.tsx, sign-in/[...sign-in]/page.tsx
Schema (feedback table + flags)	supabase/migrations/046_cancellation_feedback_and_test_accounts.sql

Validation: lint, tests, and the production build all pass. Screenshots in this document were captured live in demo mode; pages 8 and 9 are faithful UI previews because those surfaces require a billed/admin session that the demo intentionally excludes.
