

Dyia Maps

Every scheduled job, estimate, and completed visit — dropped onto a live map of your service area. Plan the day geographically, jump from pin to job, and open a ready-made route in Google Maps.

Captured live from production (dyia.io) in Demo Mode · June 11, 2026

In this walkthrough

1. Opening Maps
2. Reading the map: pin colors
3. The pin detail panel
4. Estimates on the map
5. Date ranges & filters (Pro)
6. One-tap route planning (Pro)
7. Getting there from Calendar & Jobs
8. Maps on your phone
9. How pins get on the map
10. Plan availability

1 Opening Maps

Maps lives in the sidebar under **Work**, right next to Calendar. Open it and you're looking at today's workload on a map of your service area — the view auto-fits to your pins. The header shows how many jobs are mapped for the selected range.

The Maps tab: today's jobs pinned around the service area, filters up top, and the one-tap route button.

2 Reading the map: pin colors

Every pin is color-coded by what it is, and **today's pins pulse** so the current day's work stands out at a glance. The legend sits on the map itself:

Pin	Meaning
 Blue	Scheduled job
 Orange	Estimate or free estimate visit
 Green	Completed job (within the selected date range)
 Gray	Cancelled

The on-map legend. Dense days cluster automatically — zoom in and clusters split apart.

3 The pin detail panel

Click any pin and the panel slides in with everything needed to act on that stop: customer, status, date, time window, revenue or estimate, address, and notes — plus three actions:

- **Open in Jobs** — jump straight to the job to edit or complete it
- **Directions** — opens Google Maps navigation to that address
- **Call** — dials the customer (when a phone number is on file)

Johnson Family selected: 8:00–10:00am window, address, notes, and one-tap actions.

4 Estimates on the map

Estimate visits get orange pins and show their **quoted range** instead of revenue — so you can see at a glance which stops are billable work and which are sales calls.

An estimate stop: 11:00am window with a \$350–\$450 quoted range.

5 Date ranges & filters PRO

Everyone sees **Today**. Pro unlocks **This Week** and **Custom** date ranges — pull a whole week onto the map to plan ahead, including completed work (green) for context. The **Jobs** / **Estimates** chips toggle each type on or off instantly.

This Week view: scheduled (blue), estimates (orange), and the week's completed jobs (green) together.

6 One-tap route planning PRO

Open route in Google Maps (top-right) builds a multi-stop route from every mapped pin in the current view, **ordered by appointment time**, and opens it directly in Google Maps — ready to navigate. No copying addresses, no re-typing stops.

Tip: set time windows on your jobs (e.g. "8:00–10:00am") and the route follows your schedule automatically. Stops without a time go to the end.

7 Getting there from Calendar & Jobs

Maps is wired into the rest of Dyia — anywhere you see an address, you're one tap from the pin:

- **Calendar** — expanding a job in the day panel shows a **Map** link beside the address; it opens Maps with that exact pin pre-selected.
- **Jobs** — every job card with an address has a pin button in its action row.
- **Home** — the "Your Day" card links straight to today's map.

Calendar day panel: the orange "Map" link next to the address jumps to that pin.

Jobs list: the pin icon on each card opens that job on the map.

Home dashboard: "Your Day" links to Map and Calendar side by side.

8 Maps on your phone

On mobile the map goes edge-to-edge and the pin details slide up as a **bottom sheet** — built for checking the next stop from the truck. Directions and Call are thumb-reach buttons.

Mobile: tap a pin and the bottom sheet shows the stop with one-tap Directions and Call.

9 How pins get on the map

No extra work required — Maps runs on data you already enter:

- The **Job Address** field is now Google-powered. Start typing and pick the real address; Dyia silently saves the exact coordinates with the job.
- Older jobs that were typed in free-form get located automatically the first time you open Maps.
- No address on a job? It simply doesn't pin — the map tells you how many jobs in the range still need one.

Best practice: always pick the address from the dropdown suggestions when logging a job. You'll see a small "Pinned for Maps" confirmation — that job is now instantly mappable forever.

10 Plan availability

Capability	Basic	Trial	Pro
Today's jobs on the map, pins & detail panel	✓	✓	✓
Directions & Call from any pin	✓	✓	✓
This Week & Custom date ranges	—	✓	✓
Multi-stop "Open route in Google Maps"	—	✓	✓
Ask Dyia: "what's my route for Friday?"	—	✓	✓

The map itself is available on every plan — route planning across days is where Pro earns its keep.
