

DYIA QA — RE-TEST & EXTENDED TESTING BRIEF

Regression | Dyia AI Testing | Stripe Connect Payments
Prepared for: QA Tester | Date Issued: April 2026

A total of 10 new bugs were documented during testing.
6 existing bugs are still reproduced and 2 needs clarification/fixed partially.
Please find notes under each section of this document.

Overview

The development team has reviewed and confirmed a complete pass on all 20 bugs identified in the initial QA report. This document outlines the re-testing scope required to verify those fixes, plus two additional testing workstreams: a 1-hour focused session on Dyia AI (Ask Dyia), and a full end-to-end test of the Stripe Connect payments integration.

Testing Scope	Details
Part 1: Bug Regression	All 20 original bugs — confirm each is fixed
Part 2: Dyia AI (Ask Dyia)	8 test cases — ~1 hour focused session
Part 3: Stripe Connect Payments	11 test cases — full flow incl. live test payment (to be refunded)

Part 1: Regression Testing — All Original Bugs

Every bug from the initial report must be re-tested using the same steps to reproduce. For each bug, record whether it is Fixed, Still Present, or Partially Fixed. If a bug is still present or partially fixed, please include a brief note and a new Loom video.

Environments to re-test on:

- MacBook Air M2 2022 — macOS Tahoe 26.3.1 — Safari 26.3.1
- Windows 11 (25H2) — Chrome 146
- iPhone 15 Pro Max — iOS 26.3.1 — Safari
- Galaxy S24 Ultra — Android 16 — Chrome

Notes are shared below this table

Bug ID	Description	Severity	Area	Result
BUG-001	Sign In link missing in website header on mobile	Critical / Major	Registration / Mobile	Fixed
BUG-002	User assigned Pro plan when Basic plan was selected at checkout	Critical	Subscription / Billing	Needs clarification
BUG-003	Accepted quote converted to job not shown in Jobs grid until page refresh	Critical	Quotes / Jobs	Fixed
BUG-004	Clicking + Schedule Job on accepted quote redirects to New Estimate page	Critical	Quotes	Fixed
BUG-005	Hidden customer still appears in quote/job customer search results	Critical / Major	Customers / Quotes / Jobs	Cannot Reproduce
BUG-006	Previous customer contact info not cleared when switching to customer with no details	Critical	Quotes / Jobs	Fixed
BUG-007	Header Account menu items not tappable on iPhone	Major	Mobile / Navigation	Still Present
BUG-008	Saved customer detail changes not reflected until page refresh	Major	Customers	Fixed
BUG-009	Updated first and last name not reflected in profile or header after saving	Major	Settings	Fixed
BUG-010	Ask Dya week report returns incorrect job count (1 instead of 19)	Major	Ask Dya / Insights	Cannot Reproduce
BUG-011	Ask Dya AI cannot update a job it previously logged	Major	Ask Dya / Insights	Still Present
BUG-012	Homepage shows 17 pending quotes when none exist	Major	Home Dashboard	Fixed
BUG-013	Other expense shown twice and note truncated after logging daily expenses	Minor	Jobs	Fixed
BUG-014	Sorting Newest/Oldest First does not reorder Jobs list	Minor	Jobs	Fixed
BUG-015	Revenue sorting option text truncated in dropdown	Cosmetic	Jobs	Partial
BUG-016	Log daily expenses pop-up not fully visible on screen	Minor / Cosmetic	Jobs	Still Present
BUG-017	Notification banner overlaps header account drop-down menu	Minor / Cosmetic	Home / Navigation	Still Present
BUG-018	Notification banner cut off on mobile	Cosmetic	Mobile / Home	Still Present
BUG-019	Page auto-zooms when tapping input fields on iPhone	Cosmetic	Mobile / Jobs / Quotes	Fixed
BUG-020	Dya logo text dark and unreadable in dark mode on mobile	Cosmetic	Mobile / Header	Still Present

Result options: Fixed | Still Present | Partially Fixed | Cannot Reproduce

Notes:

BUG-002

1. When the user selects the **Basic** subscription during checkout, **Pro Free Trial** is displayed in the user's account, which is expected. However, the header also shows the message "**Try Pro free for 14 days...**" with a "**Start Free Trial**" button. The button is not clickable.

Expected result: 1The "**Try Pro free**" message should not be displayed if the user already has an active free trial.

Screenshot: <https://drive.google.com/file/d/1A-MlecxeMnySvxvRoCdQX98IzYBbUL5q/view?usp=sharing>

2. When the user selects the **Basic** subscription during checkout, the user's account shows the following message: "**You have full Pro access. Your card will be charged when the free trial ends.**" This message may confuse users and make them think they will be charged for the **Pro** subscription instead of the **Basic** subscription.

Expected result: The UI should clearly indicate **which subscription plan (and whether it's monthly or annual)**, the user originally purchased. In this case, the **Basic** plan should be visible in the account. The message should also clarify that once the **Pro free trial** ends, the user will be charged for the **Basic** subscription selected during checkout.

Screenshot: <https://drive.google.com/file/d/1L2RX4LRXvx3C0F7ymcegZbj7-hXnMLq9/view?usp=sharing>

BUG-007 and BUG-017

I think these issues might be related, they are reproduced now on both **iOS mobile and macOS desktop**

Elements in the header account menu are not clickable, and other page elements overlap this menu when it's open.

See video for more details: <https://www.loom.com/share/f64787f7f3e44083836cbaa78502c3e7>

BUG-011

Still present - AI cannot apply changes to the job it created.

Video: <https://www.loom.com/share/81a73cececcd465e90ea66f27ca9e1a8>

BUG-015

The sorting drop-down on the Jobs grid is too wide now, and as a result the Search field is too small.

Screenshot: https://drive.google.com/file/d/1aKby8_xAyG-bxxYbGCfE_HzmQga4P38z/view?usp=sharing

BUG-016

All pop-ups like Log Daily expenses on the Jobs grid and Convert to Job on the Quotes grid are not visible on the grid if there are many Jobs/Quotes in the list.

Expected result: The page should either scroll automatically to the pop-up, so it's fully visible, or it should show this pop-up in the visible area of the screen.

Video: <https://www.loom.com/share/c529b26155ef40759728d07fa054f571>

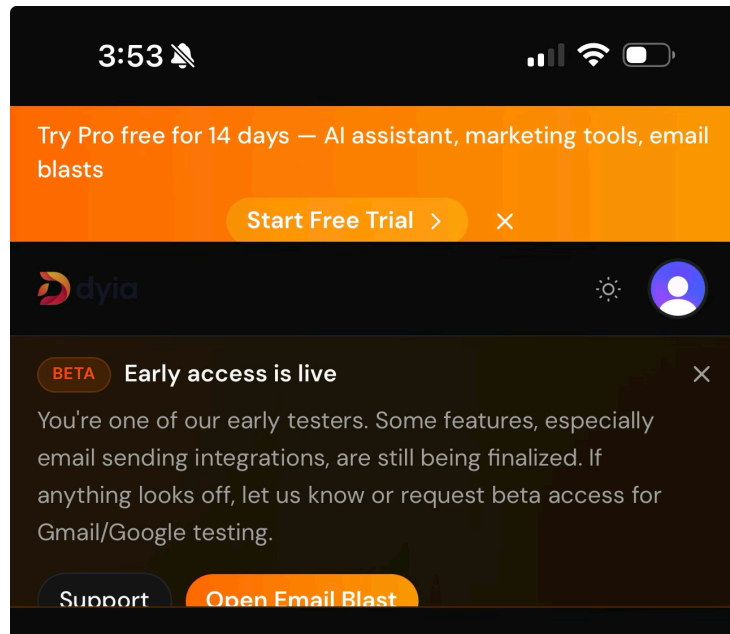

BUG-018

Notification banner is still cut off on mobile.

See screenshot below

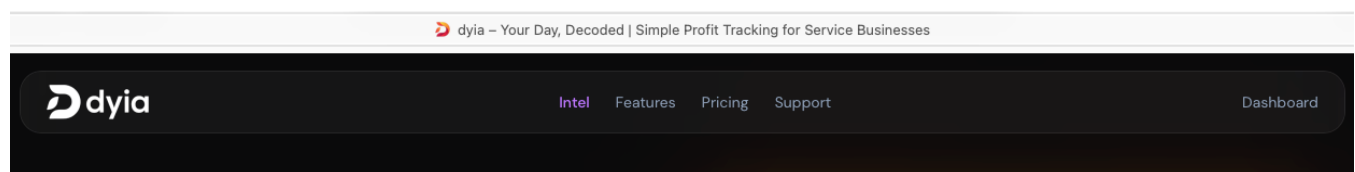

BUG-020

Dyia logo text dark and unreadable in dark mode on mobile.

Questions:

1. Currently only Intel, Features, Pricing and Support links are shown in the header on the Dyia website, **Pricing Calculator, Free quiz, Dyia AI, FAQ links are not shown anymore**, is it expected?

2. It is not obvious where a user can schedule a job. Currently, the **+ Schedule Job button** appears to be available only on the Calendar page, this functionality is also available on the Log Job page when user selects any day into the future, however it might not be obvious to all users. From a usability perspective, users may expect job scheduling option to also be available within the Jobs area. As a possible improvement, a separate action such as **+ Schedule Job button could be added to the Jobs grid** to make this functionality more visible and intuitive.

New Bugs:

BUG-021: The Name field drop-down does not reopen reliably after being closed.

Date: 04/16/2026

Page / Screen: Quotes

Severity: Critical/Major (as there is one (not obvious) clickable area that shows the list)

Browser & Device: iPhone 15 Pro Max — iOS 26.3.1 — Safari

Steps to reproduce:

1. Open <https://www.dyia.io> and sign in as a registered user with an active subscription.
2. In <https://www.dyia.io/app>, navigate to **Work > Quotes**.
3. Tap the “+ New Quote” button.
4. Note that the Name drop-down list is expanded by default.
5. Tap outside of the Name area to close the list.
6. Tap the Name field again and observe the result.

Actual result

After the **Name** drop-down is closed by clicking outside the field, clicking the **Name** field again does not consistently reopen the drop-down. The list appears only when the user clicks a small specific area on the right side of the field.

Additionally, when a valid name is entered, autocomplete suggestions are not shown unless the user clicks that same area.

Video: <https://www.loom.com/share/3ce94fae1188464080361d932dc79801>

Expected result

After the **Name** drop-down is closed, clicking anywhere within the **Name** field should reopen the drop-down. When the user enters a valid name, autocomplete suggestions should appear automatically without requiring a click on a specific part of the field.

Suggestion: Can you make this field similar to the Customer Name field on the Create Job page, so both Name fields behave in the same way on desktop and mobile.

BUG-022: The subscription plan is labeled incorrectly fro Basic pan, and the “Try Pro for free” message is shown to users who have already used the Pro trial in the past

Date: 04/16/2026

Page / Screen: Account

Severity: Major

Browser & Device: all browsers and devices

Steps to reproduce:

1. Open <https://www.dyia.io> and sign in as a registered user with a **basic subscription**.
2. In <https://www.dyia.io/app>, take a look at the message shown in the Header - Try Pro free for 14 days is shown.
3. Navigate to **Settings > Account**.
4. Check the Subscription details - **Free** subscription is shown.
5. Open the account menu in the header - Free table is shown in the User's details.

Actual result

The plan is shown as **Free** instead of **Basic**. Also, the “Try Pro for free” message is visible even if the user has already used the Pro trial before.

Screenshot: https://drive.google.com/file/d/1BWgHNUCcHLIo40fGZRYrW_P6an58tsw_/view?usp=sharing

Expected result

The plan should be labeled **Basic**, not **Free**. The “Try Pro for free” message should not be visible to users who have already used the Pro trial in the past.

BUG-023: AI insights are shown on the Jobs/Quotes grid for a user with Basic subscription plan.

Date: 04/16/2026

Page / Screen: Account

Severity: Major

Browser & Device: all browsers and devices

Steps to reproduce:

1. Open <https://www.dyia.io> and sign in as a registered user with a **basic subscription**.
2. In <https://www.dyia.io/app>, navigate to **Work > Jobs**.
3. Observe the result - AI insights are shown on the grid.
4. Navigate to **Work > Quotes** and observe the result - AI insights are shown on the grid.

Actual result

AI insights are shown on the Jobs/Quotes grid for a user with Basic subscription plan.

Screenshot: <https://drive.google.com/file/d/1tnkyp2FZxgykpyUa0Pk4fdfDnbboFgFS/view?usp=sharing>

Expected result

AI insights are not shown on the Jobs/Quotes grid for a user with Basic subscription plan. It should work similar to the Customers grid - “Unlock AI insights with Dyia Pro” should be shown

BUG-024: All ‘Upgrade to Pro’ CTA lead to the Settings > Business page for a user with Basic subscription

Date: 04/16/2026

Page / Screen: Account

Severity: Major

Browser & Device: All browsers and devices

Steps to reproduce:

1. Open <https://www.dyia.io> and sign in as a registered user with a **basic subscription**.
2. In <https://www.dyia.io/app> > Menu, click **Upgrade to Pro**.
3. Observe the result - the user is redirected to the Settings > Business page.

This is reproduced for all Upgrade to Pro CTA, e.g, Dyia AI features on the Homepage or on the Jobs/Quotes grid.

Actual result

All Upgrade to Pro CTA lead to the Settings > Business page for a user with Basic subscription

Video: <https://www.loom.com/share/4093df03319e47d1bea6bf6e634918d4>

Expected result

All Upgrade to Pro CTA should lead to to the **Settings > Account > Subscription section** page for a user with Basic subscription

BUG-025:Previously populated contact information remains in the form after removing an existing selected user and switching to add a new user.

Date: 04/16/2026

Page / Screen: Jobs/Quotes

Severity: Major

Browser & Device: All browsers and devices

Steps to reproduce - Jobs:

1. Open <https://www.dyia.io> and sign in as a registered user with an active subscription.
2. In <https://www.dyia.io/app> navigate to **Work > Jobs**.
3. Click **Log Job** > choose an **existing customer** in the Customer Name field.
4. Click **Add contact info** and observe the result - Phone, Email, Job Address are repopulated with the customer's details.
5. **Remove the selected customer** from the Customer Name field.
6. Enter the name of a **customer that does not exist** for the user in the system.
7. Observe the result in Phone, Email, Job Address - information related to the previously selected customer is still visible.

Steps to reproduce - Jobs:

1. Open <https://www.dyia.io> and sign in as a registered user with an active subscription.
2. In <https://www.dyia.io/app> navigate to **Work > Quotes**.
3. Click **New Quote** > choose an **existing customer** in the Name field.
4. Click **Edit** and observe the result - Phone, Email, Address are repopulated with the customer's details.
5. **Remove the selected customer** from the Name field.
6. Enter the name of a **customer that does not exist** for the user in the system.
7. Observe the result in Phone, Email, Address - information related to the previously selected customer is still visible.

Actual result

After removing the selected existing user, the previously populated contact details remain visible in the form when adding a new user.

Note

This behavior may confuse users because the form appears to be ready for a new user, while it still contains contact details from the previously selected one. Since users may not notice this, incorrect contact information could be unintentionally saved or used, leading to wrong user associations, communication issues, and unreliable data in the system.

Video: <https://www.loom.com/share/ec902cbd0a254092ba24fd766c8dd329>

Expected result

After removing the selected existing user, all auto-populated contact fields should be cleared so the user can enter details for a new user.

Part 2: Dyia AI Testing (Ask Dyia) — ~1 Hour Session

This section covers a dedicated ~1-hour testing session focused specifically on the Ask Dyia AI feature. The goal is to evaluate how accurately and reliably the AI reads account data, logs jobs, and responds to user queries. Please test all cases below in sequence.

Before starting:

- Ensure your test account has at least 5-10 jobs already logged across different dates
- Have at least 3 customers set up in your account
- Note the exact job count and revenue totals visible in the Jobs grid before starting — you will compare these against AI-reported figures

Test ID	Test Action	Expected Result	Result
AI-001	Ask Dyia: This week's stats — verify job count matches Jobs grid	Correct job count returned	Pass
AI-002	Ask Dyia: Log a job via chat with full details (customer, revenue, expenses, workers, notes)	Job logged correctly and visible in Jobs grid	Partial
AI-003	Ask Dyia: Update the job just logged (change revenue, add expense)	Job updated and changes reflected in Jobs grid	Fail
AI-004	Ask Dyia: Request a revenue summary for this month	Accurate revenue figure matching Jobs grid totals	Pass
AI-005	Ask Dyia: Ask for follow-up customers — verify list is accurate	Correct customers listed matching CRM data	Partial
AI-006	Ask Dyia: Ask about top-earning jobs — verify data accuracy	Correct jobs returned in correct order	Fail
AI-007	Ask Dyia: Ask a general business question unrelated to account data	Helpful response with no hallucinated account data	Pass
AI-008	Ask Dyia: Ask to create a quote for a customer	Quote created or clear guidance given; no errors	Partial

For each test, record: Pass / Fail / Partial. If Fail or Partial, include what was returned vs. what was expected and a Loom video.

New Bugs:

BUG-026: Items created by Dyia AI are not displayed immediately in the corresponding document grid after creation.

Date: 04/16/2026
Page / Screen: Ask Dyia -> Jobs/Quotes
Severity: Critical

Browser & Device: All browsers and devices

Steps to reproduce - Jobs:

1. Open <https://www.dyia.io> and sign in as a registered user with an active Pro subscription.
2. In <https://www.dyia.io/app>, navigate to **Ask Dyia**.
3. Type a message to create a Job, enter all the required information requested by AI.
4. In the Job Preview click **Save Job**.
5. Go to **Work > Jobs** and pay attention to the newly created job in the list - job is not visible.
6. Refresh the Jobs grid and observe the result: the job now appears in the list.

Steps to reproduce - Quotes:

1. Open <https://www.dyia.io> and sign in as a registered user with an active Pro subscription.
2. In <https://www.dyia.io/app>, navigate to **Ask Dyia**.
3. Type a message to create a Quote, enter all the required information requested by AI.
4. In the Job Preview click **Save Quote**.
5. Go to **Work > Quotes** and pay attention to the newly created quote in the list - quote is not visible.
6. Refresh the Quotes grid and observe the result: the quote now appears in the list.

Actual result

Items created by Dyia AI are not displayed immediately in the corresponding document grid after creation. The page refresh is required.

Video: <https://www.loom.com/share/1e70102cdc3f42b3a8c2b36e7c22bfac>

Expected result

Items created by Dyia AI should be displayed immediately in the corresponding document grid after creation, without requiring a manual refresh or additional user action.

BUG-027: Dyia AI cannot convert a quote to a job.

Date: 04/16/2026

Page / Screen: Ask Dyia -> Jobs/Quotes

Severity: Major

Browser & Device: All browsers and devices

Preconditions: At least one quote should be in draft status.

Steps to reproduce:

1. Open <https://www.dyia.io> and sign in as a registered user with an active Pro subscription.
2. In <https://www.dyia.io/app>, navigate to **Ask Dyia**.
3. Type a message to create show hot follow-ups that need attention, make sure AI returns follow-ups.
4. Continue conversation, and as suggested by AI, agree to create a job for the quote discussed in the conversation.
5. Observe the result.

Actual result

AI cannot create a job from a quote, there is an issue with follop-up and quote ids.

Video: <https://www.loom.com/share/07ca071c31b145d28f290f752dd3a5f8>

Expected result

AI can successfully create a job from a quote.

BUG-028: Dyia AI cannot return the list of the top-earning jobs.

Date: 04/16/2026

Page / Screen: Ask Dyia -> Jobs/Quotes

Severity: Major

Browser & Device: All browsers and devices

Preconditions: There should be several jobs on the Jobs grid.

Steps to reproduce:

1. Open <https://www.dyia.io> and sign in as a registered user with an active Pro subscription.
2. In <https://www.dyia.io/app> , navigate to **Ask Dyia**.
3. Type a message to share top earning jobs.
4. Observe the result.

Actual result

AI cannot return the list of the top-earning jobs sorted by correct order, it just returns the summary that includes revenue, profit, jobs etc.

Video: <https://www.loom.com/share/bea8e7855e374dd6a2b10d12636eb015>

Expected result

AI can successfully return the list of the top-earning jobs sorted by correct order.

BUG-029: A job preview from a previous Ask Dyia chat is carried over and shown in a new chat instead of generating a preview for the newly requested user.

Date: 04/16/2026

Page / Screen: Ask Dyia

Severity: Major

Browser & Device: All browsers and devices

Steps to reproduce:

1. Open <https://www.dyia.io> and sign in as a registered user with an active Pro subscription.
2. In <https://www.dyia.io/app> , navigate to **Ask Dyia**.
3. Type a message to create a new job for a user and observe the result - a new job preview is created.
4. Open a new chat and type another message to create a new job for a different user.
5. Observe the result - the job preview generated in the previous chat for the previous user is shown.

Actual result

When the user opens a new chat and requests creation of a new job for another user, the system shows the job preview generated in the previous chat for the previous user.

Video: <https://www.loom.com/share/4a3ab947baea4e8ca89df61ccd256b8b>

Expected result

When the user opens a new chat and requests creation of a new job for another user, the system should generate and display a new job preview based only on the current request. No data or preview from the previous chat should be shown.

Part 3: Stripe Connect Payments Testing

This section covers the full end-to-end Stripe Connect payment integration. The flow starts from connecting a Stripe account inside Dya, through creating a quote, and completing a real test payment. The test payment will be refunded after testing is complete.

Important Notes Before Starting

- A real (or valid test) Stripe account will be needed for onboarding — coordinate with the team on which account to use
- A real payment will be processed during testing. The team will refund this after the test is confirmed complete
- Follow the instructions inside the Payments tab in Dya exactly as presented — document any step that is unclear or missing
- Test on desktop first, then verify the full flow also works on mobile (iOS + Android)

Test ID	Test Action	Expected Result	Result
STR-001	Navigate to Payments tab — verify Stripe Connect onboarding CTA is visible	Connect with Stripe button shown clearly	Pass
STR-002	Click Connect with Stripe — verify redirect to Stripe onboarding	Stripe onboarding flow opens correctly	Pass
STR-003	Complete Stripe onboarding with test/valid details	Account connected; return to Dya with confirmation	Pass
STR-004	Verify connected Stripe account status is shown in Payments tab	Account status shown as connected/active	Pass
STR-005	Create a new Quote, add line items, and send to customer	Quote created and sent without errors	Pass
STR-006	Mark quote as Accepted and convert to Job	Job created; payment option available	Pass
STR-007	Initiate a payment request from the Payments tab as instructed	Payment link or request generated successfully	Fail
STR-008	Complete a test payment using Stripe test card details	Payment processed; confirmation shown in Dya	Blocked
STR-009	Verify payment is reflected in Jobs/Revenue data in Dya	Revenue updated; payment marked as received	Blocked
STR-010	Request refund for test payment via Stripe dashboard	Refund processed; confirm status in Dya if reflected	Blocked
STR-011	Test payment flow on mobile (iOS and Android)	Full payment flow works on mobile browsers	Blocked

For each test, record: Pass / Fail / Partial. If Fail or Partial, include what happened vs. expected and a Loom video.

New Bugs:

BUG-030: Error occurs when requesting payment

Date: 04/16/2026

Page / Screen: Quotes

Severity: Critical

Browser & Device: All browsers and devices

Preconditions:

1. Stripe is successfully configured in the test mode the a dyia user.
2. There are accepted quotes on the Quotes dashboard.

Steps to reproduce:

1. Open <https://www.dyia.io> and sign in as a registered user with the configured Stripe.
2. In <https://www.dyia.io/app> , navigate to **Work > Quotes**.
3. Click **Request Payment** for any Accepted quote on the grid and observe the result.
- 4.

Actual result

"Failed to create payment link" occurs when requesting a payment for a quote.

Video: <https://www.loom.com/share/92c4ed51bac94af9a9f8de616026707c>

Expected result

It should be possible to request a payment for a quote if Stripe is successfully configured for a user.

Open Questions from Original Report

The following items from the original report still need product/dev clarification before or during re-testing:

- BUG-002: Confirm the expected behavior when a user selects Basic plan but was previously shown the Pro plan at checkout. Is the subscription corrected now?
- BUG-004: Confirm what should happen when clicking + Schedule Job on an accepted quote that was not converted. Should it create a job, open scheduling, or something else?
- BUG-005: Confirm whether the hidden customer behavior (not shown in Customers grid but available in search) is intentional or a data filtering bug.
- Header inconsistency question: Confirm whether different header navigation across pages (main site vs Support, Privacy Policy, Pricing Calculator etc.) is intentional or a bug.
