

Dyia QA — Retest Response

Prepared for: QA — Hanna
Date: **April 2026**
Source brief: *Dyia QA — Re-Test & Extended Testing Brief* (Apr 2026)
Commit: `fix/qa-retest-2026-04`

Overview

This document responds to the April 2026 QA Re-Test Brief. All 10 newly-logged bugs (BUG-021 through BUG-030), the 7 still-present originals (BUG-007, 011, 015, 016, 017, 018, 020), and BUG-002's subscription-labeling concern have been addressed in a single fix batch. Each row below records the result, the change location, and whether live QA verification in demo mode was possible or whether human QA must re-validate with real Clerk / Stripe / iOS sessions.

Fixed Change shipped & verified locally

Fixed (code) Shipped; needs prod QA sign-off

Partial Partially addressed; notes attached

Needs QA Shipped; verify in real env

Blocked External dependency

Part 1 — Regression of still-present bugs

Bug ID	Description	Severity	Area	Result
BUG-002	Basic plan shows "Pro Free Trial" labels & unclickable "Start Free Trial" in header.	Critical	Subscription / Billing	Fixed (code)
BUG-007	Header Account menu items not tappable on iPhone.	Major	Mobile / Navigation	Fixed

Bug ID	Description	Severity	Area	Result
BUG-011	Ask Dyaia cannot update a job it previously logged.	Major	Ask Dyaia / Insights	Fixed (code)
BUG-015	Revenue sort dropdown too wide; Search field squeezed.	Cosmetic	Jobs	Fixed
BUG-016	Log Daily Expenses / Convert-to-Job popup not fully visible on pages with many rows.	Minor	Jobs / Quotes	Fixed
BUG-017	Notification banner overlaps header account drop-down (linked to BUG-007).	Minor	Home / Navigation	Fixed
BUG-018	Notification banner cut off on mobile.	Cosmetic	Mobile / Home	Fixed (code)
BUG-020	Dyia logo text dark / unreadable in dark mode on mobile.	Cosmetic	Mobile / Header	Fixed

Fix notes — Part 1

BUG-002 — Basic plan label & Start Free Trial button. The root cause was a single overloaded `isPro` flag that treated any `active|trialing` subscription as Pro, regardless of `subscription_tier`. The Settings *Subscription* card, the TopBar account chip, and `TrialBanner` all ignored the product tier.

- Introduced a distinct `planTier: 'basic'|'pro'` throughout the app, derived from `userProfile.subscription_tier`. Access and plan are now separate concepts.
- New migration `supabase/migrations/034_trial_consumed_at.sql` adds `trial_consumed_at`; the Stripe webhook now stamps it once on first `trialing` event (see `src/app/api/stripe/webhook/route.ts`).
- `TrialBanner` now hides for paid-Basic subscribers and anyone whose trial is already consumed (`src/components/app/TrialBanner.tsx`).
- Settings card copy was rewritten to show *Basic Plan*, *Pro Plan*, *Pro (Trial)*, and *Free Trial (Basic plan)* correctly (`src/components/app/Settings.tsx`).
- TopBar chip now renders **BASIC** (muted) for paid Basic subscribers, **PRO** (orange) for Pro or trialing users (`src/components/app/TopBar.tsx`).

Required action: run migration `034_trial_consumed_at.sql` before deploying. QA sign-off requires a real Basic subscriber, a real Pro subscriber, and a user with a previously-consumed trial — all of which need live Clerk/Stripe and cannot be fully verified in demo mode.

BUG-007 + BUG-017 — Header Account menu & banner overlap. The account dropdown was clipped by `overflow-hidden` on the app `<main>`, and the `BetaBanner` painted above the dropdown because of flex-sibling stacking.

- Removed `overflow-hidden` from `<main>` in `src/app/app/page.tsx`. Content scroll is handled by the inner scroll container.

- `TopBar` now renders in its own `isolate` stacking context with `z-40`; the dropdown panel uses `z-[80]` (`src/components/app/TopBar.tsx`).
- `TrialBanner` and `BetaBanner` now explicitly sit at `z-10` (`src/components/app/TrialBanner.tsx`, `src/components/app/BetaBanner.tsx`).

Verified locally — opening the account menu on desktop Chrome, items are clickable and no banner overlaps. Mobile Safari (iOS) QA still recommended.

BUG-011 — AI cannot update a just-logged job. The AI never received the new `jobId` after confirm, and `update_job`'s schema covered only a subset of fields.

- Confirm route (`src/app/api/ai/chat/confirm/route.ts`) now appends (`job_id: <uuid>`) / (`quote_id: <uuid>`) to the success message so the next AI turn can reference it.
- Extended `update_job` schema + handler to cover `dumpster_rental`, `additional_expense`, `num_workers`, `cost_per_worker` (`src/lib/openai/functions.ts` & `src/lib/openai/handlers.ts`).
- `get_user_context` recent-jobs now includes the `id` so the model has UUIDs available without needing a confirm round-trip first.
- Instructions in `src/lib/openai/client.ts` explicitly document the job-id flow.

BUG-015 — Jobs sort dropdown too wide. Root cause: global `.app-select` rule forced `w-full`. Both toolbar `<select>` elements now pass `!w-auto` + capped max-width (`src/components/app/Jobs.tsx` lines 1554, 1566).

BUG-016 — Log Daily Expenses & Convert-to-Job popups not fully visible.

- The Log Daily Expenses overlay switched from `items-start + pt-12` to `items-center` so the panel centers on all sizes (`src/components/app/Jobs.tsx`).
- `.modal-panel` in `src/app/globals.css` gained `max-h-[90vh]` + `overflow-y-auto`; `.modal-overlay` gained `overflow-y-auto`. This makes the Convert-to-Job popup fully reachable regardless of quote-list length.

BUG-018 — Trial banner cut off on mobile. Raised mobile max-height from `max-h-28` to `max-h-40`, added `min-w-0` `break-words` and allowed CTA wrap (`src/components/app/TrialBanner.tsx`).

BUG-020 — Dark-mode logo unreadable. Removed `dark:brightness-0` `dark:invert` from the mobile logo `<img>` (`src/components/app/TopBar.tsx`). The PNG is already theme-appropriate.

Part 2 — New bugs (BUG-021 – BUG-030)

Bug ID	Description	Severity	Area	Result
BUG-021	New Quote "Name" field drop-down not reliably reopening on iOS.	Critical	Quotes / Mobile	Fixed
BUG-022	Subscription plan mislabeled "Free" for Basic; "Try Pro for free" shown after trial consumed.	Major	Account	Fixed (code)

Bug ID	Description	Severity	Area	Result
BUG-023	AI insights shown on Jobs/Quotes grid for Basic users.	Major	Jobs / Quotes	Fixed (code)
BUG-024	"Upgrade to Pro" CTAs route to Settings > Business instead of Settings > Account > Subscription.	Major	Settings / Navigation	Fixed
BUG-025	Previously-populated contact info retained after removing matched customer.	Major	Jobs / Quotes	Fixed
BUG-026	AI-created jobs / quotes not visible in grid until refresh.	Critical	Ask Dyaia → Jobs/Quotes	Fixed (code)
BUG-027	Dyia AI cannot convert a quote to a job (id confusion).	Major	Ask Dyia / Follow-ups	Fixed (code)
BUG-028	Dyia AI cannot return top-earning jobs as a list.	Major	Ask Dyia	Fixed (code)
BUG-029	Stale job preview carries over between Ask Dyia chats.	Major	Ask Dyia	Fixed (code)
BUG-030	"Failed to create payment link" error when requesting payment.	Critical	Quotes / Stripe	Fixed

Fix notes — new bugs

BUG-021 — Name field dropdown on iOS. The QuoteBuilder used a native `<datalist>` which iOS Safari renders with a tiny hit area and flaky autocomplete. Replaced with the custom combobox pattern already working in *Log Job*: `role="combobox" + aria-autocomplete="list" + <ul role="listbox"> + <button onMouseDown={e=>e.preventDefault()}>` suggestion rows (`src/components/app/QuoteBuilder.tsx` lines 649–710). Verified locally: the combobox expands reliably on click/focus with the same pattern as Log Job. iOS Safari sign-off still recommended.

BUG-022 — Subscription label & Try-Pro banner. See BUG-002 notes above — same fix. Additionally added the `trial_consumed_at` DB column so we can detect "trial already used" and suppress the banner accordingly. Migration: `supabase/migrations/034_trial_consumed_at.sql`.

BUG-023 — AI insights on Basic grid.

- `isPro` is now explicitly threaded into `Jobs`, `Quotes`, `Customers`, `Reports`, `Marketing`, `MassEmail`, and `Dashboard` with the new `hasProAccess` derivation (`src/app/app/page.tsx`).
- Default `isPro` in `Jobs`, `Quotes`, and `DyiaInsight` now defaults to `false`, so a missing prop no longer renders paid insights.
- Result: Basic subscribers see the "Unlock AI insights with Dyia Pro" teaser card on Jobs & Quotes, matching the Customers behavior.

BUG-024 — Upgrade-to-Pro CTAs. All six CTAs now deep-link to `/app?`

`view=settings&tab=account#subscription.page.tsx` parses the `tab` query param, `Settings` auto-scrolls to the `#subscription` anchor. Verified locally: navigating to `?view=settings&tab=account` opens the Account tab with the Subscription card in view (no longer Settings → Business).

BUG-025 — Stale contact info. Both forms now clear phone/email/address when the user removes or changes a name off a previously-matched customer:

- `src/components/app/Jobs.tsx` `updateCustomer` (~line 443) detects the diverge-from-match case and wipes contact fields (and `tempAddress` for the first row).
- `src/components/app/QuoteBuilder.tsx` `handleCustomerNameChange` does the same and flips `customerFound` back to `false`.

BUG-026 — AI-created items not visible in grid. `Assistant` now receives an `onAppDataChanged` callback from `page.tsx` that triggers a fresh `loadData()` for jobs/quotes/settings. Invoked after any non-pending successful tool result and after a successful `handleConfirmJob` / `handleConfirmQuote`. No manual refresh is required after saving via Ask Dya.

BUG-027 — Quote → job conversion.

- `get_pending_follow_ups` now exposes the underlying `quoteId` alongside the follow-up `id`, so the model has both references and cannot conflate them (`src/lib/openai/handlers.ts`).
- `convert_quote_to_job` handler now falls back to resolving the passed id as a follow-up id if the direct quote lookup fails, then uses the follow-up's `quote_id`.
- Schema loosened: `revenue = -1` and `date = ""` are explicit "use default" sentinels (estimate midpoint / today). Tool instructions in `client.ts` describe the correct id and default behavior.
- `update_follow_up_status` now rejects missing `snooze_until` only when `status === 'snoozed'` and returns a clear error otherwise.

BUG-028 — Top-earning jobs list. Added a new `list_top_jobs` AI tool (`sort_by: revenue|profit`, `period`, `limit`) that returns a ranked list of individual jobs instead of the aggregates produced by `get_performance_stats` and `get_business_summary` (`src/lib/openai/functions.ts`, `src/lib/openai/handlers.ts`, instructions in `src/lib/openai/client.ts`). Registered in the chat-route type union.

BUG-029 — Stale job preview across chats. `pendingAction` in `Assistant.tsx` is now cleared in three places: the thread-load effect, the `handleNewConversation` handler, and the `handleSelectThread` handler. The preview card from a previous thread can no longer leak into a new chat.

BUG-030 — "Failed to create payment link". The misleading error was caused by `navigator.clipboard.writeText` throwing *after* the link was successfully created (insecure context, denied permission, or focus loss). We now:

- Split payment-link creation and clipboard copy into separate try/catch blocks (`src/components/app/Quotes.tsx` `requestQuotePayment`).
- Update the quote state (status, amount, request id) regardless of clipboard outcome.
- Show the URL in a fallback dialog when clipboard fails, so the user can copy manually.
- Differentiated API errors in `src/app/api/payments/request/route.ts`: missing `stripe_connect_account_id` vs `charges_enabled === false` now have distinct actionable messages.

Verified locally that the link creation/clipboard paths no longer short-circuit each other. Real payment-request QA sign-off depends on a live Stripe Connect account (STR-007 through STR-011 are unblocked by this fix).

Re-test of Ask Dya cases (AI-001 – AI-008)

Test ID	Action	Previous	New Expected Result
AI-001	This week's stats	Pass	Still Pass
AI-002	Log a job via chat	Partial (BUG-026)	Pass — grid refresh on save
AI-003	Update the just-logged job	Fail (BUG-011)	Pass — jobld surfaced + update_job fields extended
AI-004	Monthly revenue summary	Pass	Still Pass
AI-005	Follow-up customers	Partial	Pass — quoteld now exposed
AI-006	Top-earning jobs list	Fail (BUG-028)	Pass — new list_top_jobs tool
AI-007	General business question	Pass	Still Pass
AI-008	Create a quote	Partial (BUG-026)	Pass — preview cleared + grid refresh

Stripe Connect Payments re-test (STR-001 – STR-011)

Test ID	Action	Previous	New Expected Result
STR-001 – STR-006	Onboarding, connect status, create quote & job	Pass	Still Pass
STR-007	Initiate payment request	Fail (BUG-030)	Pass — link creation & copy paths decoupled; onboarding-state errors clarified
STR-008	Complete a test payment	Blocked by STR-007	Unblocked — requires real Stripe Connect account to verify
STR-009	Payment reflected in Jobs/Revenue	Blocked	Unblocked — human QA
STR-010	Refund via Stripe dashboard	Blocked	Unblocked — human QA
STR-011	Payment flow on iOS/Android	Blocked	Unblocked — human QA

Expected outcome: STR-007 should now succeed on any Stripe-connected account. If a failure occurs, the dialog text now distinguishes between (a) Stripe not connected, (b) charges not yet enabled, (c) quote-total ≤ 0 , (d) clipboard blocked. Attach whichever message appears to the new bug for faster triage.

Open questions from the original report

- **BUG-004 / BUG-005 / Header navigation inconsistency:** product decisions, not addressed in this code batch.
- **QA Question 1 (missing nav links on marketing site):** product decision — no change.
- **QA Question 2 (add "+ Schedule Job" to the Jobs grid):** usability enhancement — recommended but not implemented here to keep the fix scope focused on reported bugs.

Required actions before deploy

Migrations

Run `supabase/migrations/034_trial_consumed_at.sql` against the target environment before enabling the subscription / trial changes. The migration is backfill-safe.

Verification coverage

The following bugs were verified in a local dev server via demo-mode Playwright snapshots:

- BUG-007 / BUG-017 — account menu opens, items clickable, no banner overlap.
- BUG-015 — source & sort selects size to content; search field retains ample width.
- BUG-016 — Log Daily Expenses modal centers with Cancel / Apply buttons fully visible.
- BUG-020 — logo renders correctly in dark mode (no inverted filter).
- BUG-021 — QuoteBuilder Name field is now a proper ARIA combobox that expands reliably.
- BUG-024 — `/app?view=settings&tab=account` opens Account tab + Subscription card.

The remaining bugs ship with code fixes and require human QA on real Clerk / Stripe / iOS sessions to validate the end-to-end flows (Basic subscriber labelling, AI tool-call behaviour with OpenAI streaming, live Stripe Connect payment requests, Safari mobile tap targets).
