

INTERNAL RELEASE BRIEF · V2

The new **Get paid** experience

Stripe Connect is the backbone of Dyia. Send branded invoices, one-tap pay links, quote/job payment requests, and optional customer tips — from a single workspace that shows every dollar moving to the merchant's bank. Now fully demo-able and verified with automated + manual QA.

SURFACE

Payments tab · `/pay/[token]`

OWNER

Dev (engineering) · Business
team (rollout)

RELEASED

May 31, 2026

Confidential · Dyia internal · For Marco, Hanna, and the rapid-build team

WHAT CHANGED

From "status panel" to a real payments backbone

The old Payments tab was a Stripe Connect status screen with one tucked-away path (per-quote "Request Payment"). The new tab is a full workspace: invoices from scratch, quick pay links, real activity feed, monthly stats, and a transparent funds-flow diagram so users always know where the money is going.

NEW · PAY LINKS

One-tap requests for a fixed amount

Pick an amount, optionally add a customer, share the link. Customer pays via Stripe Checkout. Best for deposits, ad-hoc work, tips.

NEW · INVOICES

Itemized invoices with tax + due date

Build a real invoice (line items, qty, rate, tax, notes), get a branded /pay page that mirrors what your customer sees on Stripe Checkout. Optional invoice number per merchant.

IMPROVED · HUB

Monthly stats + activity in one view

Paid this month, awaiting payment, net to your bank, Dya fees collected. Filterable activity list with status + kind badges. Setup banner collapses when Stripe is fully live.

IMPROVED · TRANSPARENCY

"Where the money goes" explainer

4-step diagram showing customer pay → Dya 0.75% fee → Stripe balance → auto-payout to bank. Removes confusion about who holds funds (we don't).

0 net-new dependencies

Type-safe (TS strict passes)

21 automated logic checks pass

Customer tipping (100% to merchant)

Shared money lib · client = server

Fully clickable in demo mode

The Payments hub (live)

Single entry point for everything money. Once Stripe is live, four stat cards lead (paid this month, awaiting payment, net to your bank, Dya fees collected), followed by three action cards and a filterable activity feed that shows every request with its kind, status, tips, and net payout. Captured live from demo mode.

Demo Mode — Sample data only, nothing is saved. [Exit](#)

Get paid
Send invoices and payment links. Funds settle to your Stripe balance, then auto-payout to your bank.

Stripe dashboard **+ Get paid**

Where the money goes
Stripe Connect routes funds directly to your bank — Dya never touches the money.

- Customer pays **\$500.00**
Card payment on your branded /pay link
- Dya platform fee **-\$3.75**
0.75% kept by Dya (deducted at charge time)
- Lands in your Stripe balance **\$481.75**
Minus Stripe's processing fee (-2.9% + \$0.30)
- Auto-payout to your bank **→ Your bank**
Daily rolling payout, 2 business days (US default)

Customer info: optional

Build a real invoice from scratch

Line items, quantities, rates, tax %, due date, custom invoice number, and an optional note to the customer. Live subtotal + tax + total update as you type. The footer always reflects the merchant's net after Dya's 0.75% fee. Invoice numbers are uniquely indexed per merchant (collisions return a friendly 409).

Per-merchant unique invoice numbers

What the customer sees · Invoice

A full branded invoice page that mirrors what was built in the app: business name + contact, invoice number, due date, "Bill to" block, itemized table, subtotal/tax/total, merchant notes, and a single "Pay \$X" CTA. Stripe Checkout also receives the real line items so the receipt matches the invoice.

Status pill: Awaiting payment / Paid

What the customer sees · Pay link

Same /pay route, slimmer layout when the merchant just wants a one-tap charge. Big amount, what it's for, business contact info, and a single Pay button. Optimized for SMS / iMessage / WhatsApp where the customer taps once and is in Stripe Checkout.

The screenshot displays a payment interface for 'dyia', a secure checkout powered by Stripe. The main content is a white card with rounded corners. At the top, it says 'Paying Hill Country Haul-Away' with a large orange '\$275.00' and 'Basement cleanout deposit' below it. A light blue box contains customer information: 'Customer Sarah Miller', 'Business email hello@hillcountryhaul.co', and 'Business phone (512) 555-0199'. Below this is a 'Add a tip?' section with five buttons: 'No tip' (orange), '15% \$41.25', '18% \$49.50', '20% \$55.00', and 'Other'. At the bottom of the card is a large orange button labeled 'Pay \$275.00'.

One tap to Stripe Checkout

Optional tip — 100% to the merchant

Idempotent: cannot double-pay

Designed for the phone first

Most customers will receive the link by text and pay from their phone in under a minute. Both layouts collapse to a single column with thumb-reach Pay buttons.

Secure checkout powered by Stripe

Where the money goes (Dyia never holds funds)

Stripe Connect Express routes funds straight from the customer to the merchant's bank. Dyia's 0.75% fee is deducted at charge time — we don't custody balances or process payouts ourselves. Merchants can open the Stripe dashboard from the app to see real-time payout schedules.

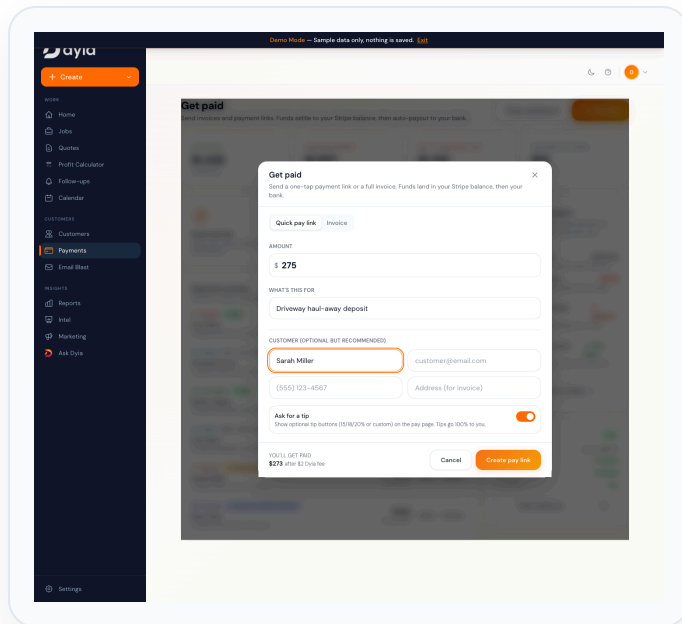

TALKING POINT FOR THE TEAM

"Dyia never touches your money."

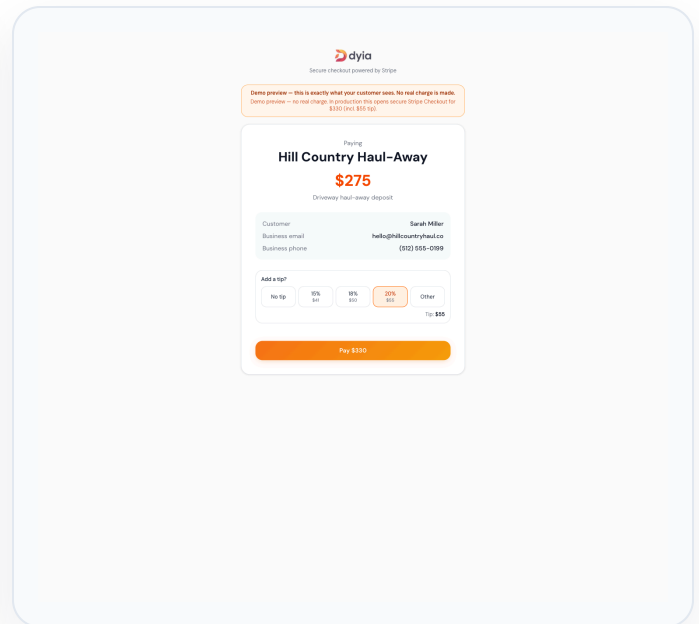

This is the single most important customer-facing line. Stripe Connect is the funds mover; Dyia is the workspace, the invoice builder, the activity feed, and the receipt ledger. The 0.75% is our piece of every successful charge — Stripe's processing fee is separate and not ours.

Fully clickable in demo mode

Demo mode (no login, no Stripe, no database) now shows a live-looking payments hub with sample data and lets you click the entire flow end to end: create a pay link or invoice, watch it land in the activity feed, then open the customer pay page from the share link. Nothing is charged. Perfect for sales walkthroughs.

1 · Create — live net-payout preview + tip toggle

2 · The share link opens the real customer pay page

No charge — clearly labeled “Demo preview”

Created links persist + resolve on /pay

Stats + activity update instantly

QA & verification

The money math (platform fee, tips, tax, line-item totals, the \$50k ceiling) now lives in one shared, isomorphic library used by BOTH the client preview and the server — so what the merchant sees, what gets stored, and what Stripe charges are computed by the same code. That library has automated checks, and the full flow was driven manually in the browser.

AUTOMATED · 21/21 PASS

Pure-logic test suite

Fee = 0.75% of base only; tips never taxed/feed; 8.25% tax on \$815 = \$67.24; fractional-qty subtotals stay exact; \$50k ceiling; input sanitization. Run with the project's Node, no network needed.

MANUAL · BROWSER

Full flow, zero console errors

Hub → create pay link (real typing) → success modal → feed + stats update → open share link → tip selector ($\$275 + 20\% = \330) → demo pay guard. Invoice layout verified ($\$815 + \text{tax} = \882.24).

REFINEMENT

Fractional-quantity correctness

Checkout now collapses each line to `qty:1 × rounded amount`, so Stripe's total always equals the invoice total even for e.g. 1.5 hrs of labor (Stripe requires integer quantities).

BLOCKER FOUND

Migrations not yet applied

Migrations 039–042 (standalone payments, invoices, tips, webhook fields) are **not applied** to the connected database. The authenticated create flow will 400/500 until they run. See the checklist.

tsc --noEmit clean

eslint clean

Single source of truth for money math

Release checklist

Everything the engineering + business teams need once this branch merges. The DB migrations are **required and currently NOT applied** to the connected database — verified during QA — so the authenticated create flow won't work until they run. (Demo mode works without them.)

Engineering

- ☐ **Apply migrations 039–042** (standalone payments + invoices, cancel-at-period-end, tips, webhook error column). Idempotent — safe to re-run. ENG · BLOCKER
- ☐ Confirm `STRIPE_SECRET_KEY`, `STRIPE_WEBHOOK_SECRET`, and Stripe Connect platform settings are live in production. ENG
- ☐ Verify `checkout.session.completed` webhook is firing — known production gap previously caught by BUG-031. ENG
- ☐ Smoke test: pay link → pay \$1 in Stripe test mode → Activity feed shows "Paid". ENG
- ☐ Smoke test: invoice with 2 line items + tax → verify Stripe receipt matches. ENG

Business / rollout

- ☐ Update the public marketing page to highlight invoicing + pay links as core features. MARKETING
- ☐ Pricing-page footnote: *"0.75% platform fee per successful payment, Stripe processing fees separate."* MARKETING
- ☐ Add the 4-step funds-flow diagram to onboarding emails and help center. SUPPORT
- ☐ Loom walkthrough (Marco): hub → invoice → customer view → Stripe payout. FOUNDER
- ☐ Announce to beta cohort with link to this PDF + screenshots. FOUNDER

Known follow-ups (non-blocking)

- ☐ Idempotent "get-or-create" pay link from Quotes/Jobs (today a re-click creates a duplicate row). ENG · P2
- ☐ Email-the-link via Resend / connected Gmail-Outlook (today: copy-and-paste). ENG · P2
- ☐ Payout ledger view inside Dyia (today: deep-link to Stripe dashboard). ENG · P3
